

COMP1950 :: HOMEWORK 08

OBJECTIVE Use A Front End Template / SASS

REQUIREMENTS Build a new .html page layout with a header, footer, navigation and content areas using any front-end template system of your choice:

- <https://getbootstrap.com/>
- <http://getskeleton.com/>
- <https://unsemantic.com/>
- <https://foundation.zurb.com/>
- Search online for others

The navigation on this page can contain generic links (eg: Page 1, Page 2, etc and the links can use href="#"). Populate the content area with Lorem Ipsum html content.

Use SASS to write some styles of your own that you add to the templated styles. The SASS file must include examples of both SASS variable use as well as mixins. You may write your own mixins or use those written by other developers (eg: <https://www.bourbon.io/>). Upload both .scss and .css files to the same css folder on the bccomp.ca server.

Update the 'Templates' link on your hub page so that it links to this homework page.

SUBMISSION **Assigned:** Session 9

Due: 11:59pm the night before Session 10
